

Dr. Paul Sanghera, the best selling author of several books in science and technology, offers a taste of the discipline of biotechnology by presenting more than 325 flashcards in this easily portable book. Primarily designed to be used with your textbook, this book is also a quick introduction to (or overview of) biotechnology. Although the book is self contained within its scope, it assumes that you have already studied the material from a textbook on biotechnology, and use this book as a quick review and reference. Special features: *Most of the essential concepts, terms, formulae, and techniques are covered. *The depth and style of the coverage makes these flashcards indexes into your memory so that if you go through these flash cards after reading a textbook, its almost equivalent to going through the textbook once again, only in much less time. *The flashcards are largely self-contained and no reference to any other book is made. This means these cards work with any book and independent of any book. * These flashcards come in a book, not in a box of loose cards; so these are much easier to manage than those loose cards. No more loose cards, no more lost cards. *This book is designed as a convenient and portable reference for on-the-go studying. You can take it anywhere and use it when a time window becomes available.

Practical child study, The Flooded Earth: Our Future In a World Without Ice Caps, Science and Engineering Leveled Readers: Leveled Reader, Extra Support Grade 1 Book 032: How Do Engineers Solve Problems?, The Tale Of Greedy Reeby, Mercurys Mysteries / Pulsars: Still a Puzzle / A New Comet Lvey / An Electronic Camera for Everyone / Hubble in Trouble (Sky & Telescope, Volume 80, Number 3, September 1990), Frederick: (Reissue; Caldecott Honor Book, New York Times Best Illustrated Book of the Year), 1, 2, 3 Colour and Learn Book (Colour & Learn),
