

Modeling and Analysis of Stochastic Systems, Third Edition (Chapman & Hall/CRC Texts in Statistical Science)

This practical and accessible text enables readers from operations research, business, engineering, public policy and computer science to analyze stochastic systems. It presents the major cases of stochastic processes discrete and continuous-time Markov chains, renewal processes, regenerative processes, and Markov regenerative processes. This third edition has been updated with many improvements and corrections, the latest references, additional topics - including designing large scale systems and fluid models - and additional examples and exercises.
