

The Raptor Almanac: A Comprehensive Guide to Eagles, Hawks, Falcons, and Vultures

A full-color, indispensable, and entertaining guide for bird-watchers, raptor enthusiasts, and anyone interested in the natural world. The Raptor Almanac is a comprehensive reference to the 310 species of diurnal (day-flying) birds of prey worldwide, including hawks, eagles, falcons, and vultures. For the birder or naturalist who wants to go beyond the fundamentals, and especially for anyone fascinated by birds of prey. The Raptor Almanac gathers virtually every important fact about these birds in an accessible and entertaining way. This inspiring, all-inclusive book covers raptor evolution, taxonomy, behavior, courtship and breeding, nesting, migration, human/bird interaction, environmental threats, and conservation efforts - from the well-known programs to reintroduce the California condor and peregrine falcon, to lesser known efforts to preserve the snail kite and the ferruginous hawk. This volume also includes the latest advances in the studies of both raptor biology and ecology.
